Химические материалы

Широкое применение железо-окисные пигменты нашли в производстве цветных строительных материалов и изделий – искусственный камень, тротуарная плитка, черепица и т.д. Они применяются также в производстве оксидных тонеров для принтеров, керамической глазури, катализаторов химических процессов. Кроме того, железистоокисные пигменты широко применяются как для непосредственного окрашивания пластмасс в массе, так и для производства суперконцентратов.
